

Product Name

Name: Minimum Essential Medium-Alpha, with L-Glutamine, **SLE Grade**

Cat. No.: C3061-0500

Size: 500 mL

Product Description

Minimum Essential Medium Eagle (MEM-E) is a modification of Basal Medium Eagle (BME). It was developed by Harry Eagle to meet the specific nutritional requirements of certain subtypes of HeLa cells and normal mammalian fibroblasts. MEM includes a higher concentration of amino acids so as to closely approximate the requirement for protein synthesis of cultured mammalian cells. MEM can be used either with Earle's salts or Hank's salts and can also be additionally supplemented with non-essential amino acids (NEAA). This medium can be further modified by eliminating calcium to facilitate the growth of cells in suspension cultures.

Minimum Essential Medium-Alpha is produced to reach the super-low endotoxin (SLE) grade, with the endotoxin level ≤ 0.1 EU/mL as measured by the Limulus amoebocyte lysate (LAL) method. The production process and quality management system meet the requirements of cGMP and have passed the ISO 13485 certification.

It does not contain deoxyribonucleosides and ribonucleosides. Users are advised to review the literature for recommendations regarding medium supplementation and physiological growth requirements specific to different cell lines.
